

RECOMMENDATION TO ALL CLUBS STOPPING OF PLAY IN VERY HOT CONDITIONS

That each Club have a thermometer available to check air temperatures. The readings to be taken from the halfway of a green at the 2 metre mark on a rink at a height of 1.5 metres. Two readings to be taken, one at each end of a rink. If the averaged readings are 32 degrees C or above, then play should stop.

If a Greenkeeper is concerned that play is damaging the greens, he can stop play at any time.

These are recommendations only, but it is expected that Clubs will be aware of the danger to players in extreme heat.
